Detailed Actions

Drawings

1. Figures 2 and 3 should be designated by a legend such as -- Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). The objection to the drawings will not be held in abeyance.
2. The drawings are objected to because on Figures 2-5 all lines are the same and it is difficult to differentiate one line from others. Different types of lines are recommended (dashed, dashed/dotted etc.). The objection to the drawings will not be held in abeyance.
3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, "the system for calculating a transition to the first thermal threshold value, wherein the transitioning thermal threshold value is proportional to the motor I.sup.2t value" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should

include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

4. The disclosure is objected to because of the following informalities: Specification indicates, "Such a pulse is shown at 50 in FIG. 4"(Page 6, Lines 27-28). Obviously applicants meant to indicate Figure 5. Line 10 on Page 3 refers to "'748" Patent, when it should be referenced to "'784".

Appropriate correction is required.

Art Unit: 2836

Claim Objections

5. Claims 1,2, and 6 are objected to because of the following informalities: Claims 1 and 2 recites the limitation "the transitioning thermal threshold value". There is insufficient antecedent basis for this limitation in the claims. Claim 6 recites the limitation "the transitioning trip threshold". There is insufficient antecedent basis for this limitation in the claim.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims recites the limitation "a system for calculating a transition to the first thermal threshold value". It is not clear from the claims and from the specification what is such system and from what condition of the motor (start, stop or run) such transition is expected. A

Art Unit: 2836

situation requiring transition to the first thermal threshold value has not been clearly explained in the Specification.

Dependent Claims 2-5 don't clear identified indefiniteness.
